

MCAFEE AND RIVERBED PARTNER TO DELIVER COMPREHENSIVE WAN OPTIMIZATION AND MULTILAYER SECURITY IN A SINGLE APPLIANCE

Joint Solution Lowers Total Cost of Ownership for Distributed Enterprises

SAN FRANCISCO AND SANTA CLARA , Calif. – April 7, 2010 – McAfee, Inc. (NYSE: MFE), and Riverbed Technology (NASDAQ: RVBD), the IT performance company, today announced a partnership that delivers a best-of-breed and comprehensive security and wide area network (WAN) optimization solution for organizations with remote offices. The one-box solution, which will include a virtual instance of McAfee Firewall Enterprise software running on the award-winning Riverbed® Steelhead® appliance, enables enterprises to deliver accelerated data and application access to users while protecting critical information and infrastructure from security threats.

The joining of forces between the leading WAN optimization provider and the world's largest dedicated security company will help customers cost effectively address the distributed computing challenges associated with key IT initiatives such as server centralization, data center consolidation and a highly mobile workforce. Customers will realize immediate, tangible benefits and lower total cost of ownership through device consolidation, reduced operational complexity and lower business risk.

Riverbed WAN optimization solutions enable organizations of all sizes to overcome a wide range of IT and private cloud infrastructure performance bottlenecks, including poor application performance, slow database backups and insufficient bandwidth at remote sites. By speeding the performance of applications between data centers, remote offices and mobile workers, in some cases by up to 100 times, the award-winning Riverbed Steelhead products enable companies to consolidate IT while improving staff productivity and collaboration.

The Riverbed Services Platform (RSP) is a virtualized, extensible data services platform integrated with the Steelhead appliance hardware that allows customers to deploy multiple best-of-breed edge services that formerly required dedicated servers. Customers can deploy virtualized applications, such as McAfee Firewall Enterprise software, directly on the RSP to

further minimize the hardware infrastructure footprint at the branch office, thereby reducing operational overhead.

With McAfee Firewall Enterprise software, administrators can immediately begin to put firewall rules in the proper business context and take advantage of centralized firewall management, reporting and user-friendly rule creation capabilities. Additionally, McAfee Firewall Enterprise software offers unprecedented levels of threat protection such as VPN for secure site-to-site connectivity, anti-spam, URL and Web content filtering, encrypted traffic inspection, configurable application-level protection, and reputation-based global threat intelligence to block attacks before they occur.

“In Australia and the world over, our customers are consolidating their IT infrastructure and moving data farther from users, which has negatively impacted the response times of business-critical applications. Our WAN optimization solutions help these customers overcome these issues and deliver LAN-like application performance to distributed employees,” said Steve Dixon, regional director, Australia/New Zealand, Riverbed.

Venugopal Pai, vice president of alliances at Riverbed added: “In addition to accelerating performance over the WAN, it is a logical extension to partner with companies like McAfee whose best-of-breed network security solutions are essential for a reliable distributed IT infrastructure.”

“Customers are demanding simplified management and security that’s integrated into critical network infrastructure platforms, such as the Riverbed Steelhead appliance,” said Dan Ryan, executive vice president and general manager of the Network Security business unit at McAfee. “By recognizing the eventual integration and overlap of security within the network environment, we are taking a proactive approach to offering customers a set of proven solutions that provide choice and flexibility in the marketplace. The coupling of the strengths of both companies is expected to deliver a set of solutions that customers can depend on to protect their most valuable data assets.”

Availability

The joint solution is scheduled to be available in April.

About McAfee, Inc.

McAfee, Inc., headquartered in Santa Clara, California, is the world's largest dedicated security technology company. McAfee is committed to relentlessly tackling the world's toughest security challenges. The company delivers proactive and proven solutions and services that help secure systems and networks around the world, allowing users to safely connect to the Internet, browse and shop the web more securely. Backed by an award-winning research team, McAfee creates innovative products that empower home users, businesses, the public sector and service providers by enabling them to prove compliance with regulations, protect data, prevent disruptions, identify vulnerabilities, and continuously monitor and improve their security.

Forward Looking Statements

This press release contains forward-looking statements, including statements relating to the expected demand for Riverbed's products and services, and statements relating to Riverbed's ability to meet the needs of distributed organizations. These forward-looking statements involve risks and uncertainties, as well as assumptions that, if they do not fully materialize or prove incorrect, could cause our results to differ materially from those expressed or implied by such forward-looking statements. The risks and uncertainties that could cause our results to differ materially from those expressed or implied by such forward-looking statements include our ability to react to trends and challenges in our business and the markets in which we operate; our ability to anticipate market needs or develop new or enhanced products to meet those needs; the adoption rate of our products; our ability to establish and maintain successful relationships with our distribution partners; our ability to compete in our industry; fluctuations in demand, sales cycles and prices for our products and services; shortages or price fluctuations in our supply chain; our ability to protect our intellectual property rights; general political, economic and market conditions and events; and other risks and uncertainties described more fully in our documents filed with or furnished to the Securities and Exchange Commission. More information about these and other risks that may impact Riverbed's business are set forth in our Form 10-K filed with the SEC on February 12, 2010. All forward-looking statements in this press release are based on information available to us as of the date hereof, and we assume no obligation to update these forward-looking statements. Any future product, feature or related specification that may be referenced in this release are for information purposes only and are not commitments to deliver any technology or enhancement. Riverbed reserves the right to modify future product plans at any time.

About Riverbed

Riverbed Technology is the IT performance company. The Riverbed family of wide area network (WAN) optimization solutions liberates businesses from common IT constraints by increasing application performance, enabling consolidation, and providing enterprise-wide network and application visibility – all while eliminating the need to increase bandwidth, storage or servers. Thousands of companies with distributed operations use Riverbed to make their IT infrastructure faster, less expensive and more responsive.
